

YUVA Future 6.0

Solution Submission Format

Standard Operating Procedure (SOP) for All Participating Teams

Applicable to	All teams across Road Safety, Climate Action, Accessibility & Health tracks
Submission components	Written Solution Report + Pitch Deck + Whitepaper Contribution Sheet
Scoring basis	National Default Rubric — Total 100 marks — National Qualifying Threshold: 70
Why this matters	Your submission feeds directly into Yi's National Policy Whitepaper for government

1. Why This Format Matters

Every team across every chapter and track will be evaluated against the same national rubric. Submitting in this format ensures your work is judged fairly alongside hundreds of other teams.

There is a second, bigger reason: the strongest problem understanding, solutions, and policy recommendations from across the country will be compiled into Yi YUVA's National Policy Whitepaper - to be formally presented to the relevant Government ministry. A clear, consistent format means your idea can move from your report directly into a national policy document, in your own words.

Follow this structure exactly. It is designed so that nothing you build is lost - and everything is scored, and considered, fairly.

2. What Teams Must Submit

Every team must submit three components:

#	Component	Purpose	Length
1	Written Solution Report	Core scored document - full detail of your problem, solution & policy ask	4 - 6 pages
2	Pitch Deck	Presented live to the jury during the competition phase	8 - 10 slides
3	Whitepaper Contribution Sheet	Fixed - format 1 - pager used to compile the national whitepaper	1 page

Section 3 — Written Solution Report Structure

3. Written Solution Report

Structure your report using the exact sections below, in this order. Marks shown next to each heading indicate how that section is scored under the national rubric.

Cover Section (Not Scored)

- Team Name, Institution Name, Yi Chapter, City, Track (e.g., Road Safety)
- Problem statement title (e.g., Golden Hour Response System)
- Team member names & roles
- Date of Chapter Level round

3.1 Problem Understanding [15 marks]

- Restate the problem in your own words, with India - specific context.
- Use at least one data point/statistic beyond what was given in the problem statement - cite your source.
- Identify the root cause(s) of the problem, not just its symptoms.

Suggested length: 250–300 words. Scoring favours depth and clarity over length - a precise 200-word root-cause analysis beats a vague 500-word restatement.

3.2 Proposed Solution [25 marks]

- Solution name and a one-line description.
- Solution type - tick all that apply: Product / Technology / Service / Hardware / Platform / Hybrid.
- Detailed explanation: how it works, core features or components.
- How does this solution directly address the root cause identified in 3.1?
- Who are the target users/beneficiaries?
- Include a visual - diagram, wireframe, prototype sketch, or system architecture (strongly encouraged, not optional in spirit).

Suggested length: 500–600 words + 1 visual. This is the highest-weighted section - invest the most effort here.

3.3 Policy Recommendation [feeds Solution Quality & Impact Potential]

- What specific policy gap does your solution expose, or rely on, to work at scale?
- What exact policy change, new guideline, or amendment are you recommending?
- Which government body, ministry, or department should act on this?
- How would this policy change help your solution scale nationally?

Suggested length: 200–250 words. Write this as a real policy ask - specific and actionable, not a vague call for 'more awareness' or 'better enforcement.' This section may be lifted directly into the national whitepaper.

3.4 Feasibility & Scalability [20 marks]

- Implementation plan — what happens in the first 90 days?
- Rough cost estimate (even an approximate budget is acceptable - show your thinking).
- Required infrastructure, resources, and partners.
- Key stakeholders and their roles.
- Scalability roadmap: Pilot → City → State → National.

Suggested length: 350–400 words. Judges are explicitly scoring 'can this actually work in India' — ground every claim in practical reality.

3.5 Innovation & Differentiation [15 marks]

- What makes your approach fresh or different?
- Compare with any existing solutions or efforts - what do they miss that you address?
- Why hasn't this been done before, or what is your unique unlock?

Suggested length: 200 words. Generic or copied ideas score lowest on this criterion — be specific about your unique angle.

3.6 Impact Potential [15 marks]

- Who benefits, and how many people (quantify wherever possible)?
- Measurable outcomes or KPIs you would track.
- Expected timeframe to see real-world impact.

Suggested length: 200 words. Unquantified impact ("this will help many people") scores low — use numbers, even estimates.

Annexures (Not Scored)

- References and data sources cited.
- Supporting material: survey data, extra mock-ups, technical notes.

Section 4 — Pitch Deck Structure

4. Pitch Deck (For Live Presentation at City-level and Final Round)

[10 marks]

Your deck is a condensed, visual version of your written report. It is presented live to the jury and scored heavily under Presentation & Clarity, while also reinforcing every other criterion.

Slide	Content
1	Title — Team name, chapter, track, problem statement
2	The Problem — India context, data, root cause
3	Our Solution — what it is, in one clear visual
4	How It Works — demo, prototype, or architecture walkthrough
5	Policy Ask — the specific recommendation, stated clearly
6	Feasibility & Implementation Plan
7	Scalability Roadmap — Pilot to National
8	Impact — who benefits, and by how much
9	What's Different — your innovation, in one line
10	Thank You / Q&A

Presentation Guidelines

- Time limit: 7–10 minutes presentation + Q&A (confirm exact timing with your Chapter Admin).
- Visual-first slides — avoid dense paragraphs; use diagrams, numbers, and short phrases.
- Every team member should be ready to answer questions — juries score the team, not just the presenter.

Section 5 — Whitepaper Contribution Sheet

5. Whitepaper Contribution Sheet

This is a separate, fixed-format one-pager. It is not scored — but it is mandatory. It allows Yi to mechanically compile inputs from hundreds of teams into a single, coherent National Policy Whitepaper for government. Fill every field below exactly as instructed.

Field	Instruction
Track	One of: Road Safety / Climate Action / Accessibility / Health
Problem Statement	Exact title
Team Details	Team name, chapter, city
Problem Summary	Max 50 words — the problem, in plain language
Solution Summary	Max 75 words — what you built and how it works
Solution Type	Tick: Product / Technology / Service / Hardware / Platform
Policy Recommendation	Max 75 words — written as a formal policy ‘ask,’ ready to be read by a policymaker
Target Ministry/Department	Name the specific government body this concerns
Expected Impact	Max 50 words — quantified wherever possible
Key Evidence	The single strongest statistic or data point backing your case, with source

Write the Policy Recommendation field in formal, direct language — for example: “We recommend that [Ministry] mandate [specific change] under [relevant Act/scheme], to address [specific gap].” This sentence may be extracted, near-verbatim, into the final whitepaper.

6. Submission Logistics (COMPULSORY TO BE FOLLOWED)

Item	Requirement
Written Report format	PDF, max 6 pages (excluding annexures)
Pitch Deck format	PPTX or PDF, max 10 slides
Whitepaper Sheet format	PDF, using the fixed 1-page template provided
File naming convention	Track_ChapterName_TeamName_PSNumber (e.g., RoadSafety_Mumbai_TeamAarav_PS01)
Submission channel	Via the official registration portal (team login → submissions)
Deadline	As communicated by your Chapter Admin — no extensions without prior approval

7. Scoring Rubric (Reference)

This is the exact national default rubric your submission will be scored against — total 100 marks, national qualifying threshold: 70.

Criterion	Description	Max
Problem Understanding	Depth, clarity, India-context relevance	15
Solution Quality	Strength and structure of the idea	25
Feasibility & Scalability	Can this actually work in India?	20
Innovation & Differentiation	Fresh thinking, not commonly discussed	15
Impact Potential	Real-world change potential	15
Presentation & Clarity	Communication, structure, storytelling	10

8. Final Checklist Before Submission

- ☐ Written report follows all 6 sections in the exact order specified
- ☐ Problem Understanding includes at least one cited, India-specific statistic
- ☐ Solution clearly states its type (Product/Tech/Service/Hardware/Platform)
- ☐ A diagram, sketch, or visual of the solution is included
- ☐ Policy Recommendation names a specific ministry/department and a specific ask
- ☐ Feasibility section includes a rough cost estimate and a 90-day plan
- ☐ Impact Potential is quantified, not just described
- ☐ Pitch deck is within 10 slides and follows the structure in Section 4
- ☐ Whitepaper Contribution Sheet is filled completely, within word limits
- ☐ All files follow the naming convention in Section 6
